Trans Ocean

more than flexible

TransOcean
bulk logistics solutions

RhinoBulk™

More than a logistics provider

Since 1984, our motivation and ability to excel in providing a world class service is driven by our capacity to supply the most advanced Flexitank solution, together with full door to door logistics and proven technical knowledge.

Why RhinoBulk™?

The RhinoBulk™ has revolutionised bulk liquid shipping, it is a unique Flexitank system exclusively manufactured by the Trans Ocean group.

A RhinoBulk™ will transform a standard 20 foot container into a bulk liquid transportation system.

In comparison to other full load shipments, the single layer polyethylene RhinoBulk™ ensures quick and effective loading and unloading of your product.

Shipping your liquid product in bulk delivers proven environmental & economical advantages. The product to RhinoBulk™ packaging ratio can reach 400:1.

Available in capacities of 10,000 (2641 US Gallons) to 24,000 litres (6340 US Gallons), this can represent more than double the capacity of pre-packaged cargo.

(*The maximum product allowable in the RhinoBulk™ shall be the greater of:
24,000kg if the specific gravity > 1, or 24,000 litres if the specific gravity < 1)

To find out how we can assist you further with your shipment requirements, simply contact us at one of our regional offices or via our website.
